

Benefits of Planting Honey Bee Forage to Farmers, Orchardists, Landowners and Land Managers

Planting a bee forage cover crop will:

- **Improve soil fertility**
- **Increase organic material**
- **Fix nitrogen**
- **Improve water infiltration**
- **Suppress noxious weeds**
- **Conserve soil moisture**
- **Increase beneficial insects by providing pollen and nectar**
- **Increase pollination diversity by attracting native pollinators**
- **Reduce soil erosion**
- **Create visual appeal**
